

INSTRUCTIONS

Fixing F1206 panel to ceiling or wall

Positioning the template

1. Mark centre point of where the panel is to be positioned on ceiling
2. Screw the template to ceiling through hole C at that centre point
3. Align the template as required (eg sides in line with the nearest wall)
4. Lock in position with a second screw through hole L

Fixing the ceiling tracks in place

5. Fix tracks to ceiling hard against the template end (facing inwards as per end profile shown here) ensuring compliant substrate and fixing system to take total 9kg load
6. Remove template and provide for power cable access in a suitable location
7. Insert power cable
8. Slide panel in place on the tracks
9. Use a long screwdriver to tighten lock nuts provided for seismic security
